They can be used diagnostically to determine the presence of or predisposition to a disease associated with altered levels of the polypeptide in mammals (especially humans) by detecting alterations in polypeptide expression levels relative to control samples. They are useful to identify agents binding polypeptide (e.g. cellular receptors or downstream effectors) and/or agents modulating cellular polypeptide expression or activity, useful as antagonists and accomists in disease transmitter.
                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptides can be administered therapeutically, especially using gene therapy and expressing the encoding DNA in vivo, to treat or prevent GPCRX associated disorders, especially in humans. For example, they can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encode G-coupled protein-receptor related polypeptides (ABB44522-ABB44543). The isolated polypeptide having a sequence differed by no more than 15% of amino acid residues from one of 22 amino acid sequences (or mature forms of the sequences), fully defined in the specification and corresponding to human G-protein coupled receptor X (GPCRX) polypeptides. The polypeptides have potential cardiant, antiarteriosclerotic, anabolic, cytostatic and antiviral activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 8; 157pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
```

psychiatric diseases (e.g. schizophrenia), inflammatory disorders (e.g. diabetes) and respiratory disorders (e.g. adult respiratory distress syndrome, ARDS). The GPCR protein is also useful for identifying a modulator of the expression of the protein. It also serves as a target for identifying agents for use in mammalian therapeutic applications, e.g. a human drug, particularly modulating a biological or pathological response in a cell or tissue that expresses the protein, in biological assays related to GPCRs that are related to members of the chemokine assays useful in diagnosing a disease or predisposition to assays. GPCR is also useful in diagnosing a disease or predisposition to a disease mediated by the peptide, in pharmacogenomic analysis. polynucleotide sequences can also be used in gene therapy. The persents the novel human GPCR of the invention. The present invention relates to the isolation of a novel human G-protein coupled receptor (GPCR) which is related to the chemokine receptor subfamily. The cDNA and gene sequences encoding for GPCR are also given in the invention. The sequences of the invention are useful for diagnosing and treating diseases or conditions mediated by human proteases. Such diseases include hyperproliferative disorders (e.g. hyperplasia), neurological disorders (e.g. Parkinson's disease),

The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200136473-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rheumatoid arthritis; autoimmune disorder; respiratory ailment;
                                                                                                                                                                                                                                                                                              diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                          sequence is one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel G protein-coupled receptors (nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 37; Page 89; 261pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New G protein-coupled polynucleotide useful
                                                                                                                                                              Sequence

                                                                                              Qy
                                                                                                                                                                                                                                              The invention relates to G protein coupled receptor (GPCR) family commember, 57242 and its corresponding nucleic acid sequence. The 57242 nucleic acid and polypeptide are useful for diagnosing, preventing correcting a subject having or at risk of developing a metabolic disorder, particularly a disorder associated with aberrant lipogenesis or aberrant lipolysis, obesity or diabetes. The 57242 DNA and protein are also useful for treating a subject having bone disorder, where the disorder is osteoporosis or a disorder associated with aberrant correction of the disorder is osteoporosis or a disorder associated with aberrant correction of the disorder is or aberrant bone resorption. These diseases include cobesity, diabetes, hyperlipidaemia, overweight, anorexia or cachexia. The 57242 DNA and protein are also useful for treating a subject having haematopoietic disorders, autoimmune disorders e.g. psoriasis and multiple sclerosis, brain disorders, degenerative diseases e.g. Alzheimer's disease and Pick disease and disorders involving heart. The 57242 DNA cacid and polypeptide are also useful for modulating adipocyte activity such as hyperplastic growth, hypertrophic growth or lipogenesis. The 57242 DNA is used in gene therapy. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
```

The invention comprises the amino acid and coding sequence of the human purinergic-like 6-protein coupled receptor AXOR87. The AXOR87 DNA and protein sequences of the invention may be used for treating diseases related to immunity, autoimmunity, inflammation, immunodeficiency, and infections (i.e. bacterial, fungal, viral, protozoan). The AXOR87 DNA an protein sequences are particularly useful for treating: cancers, diabetes, obesity, anorexia, bulimia, asthma, psoriasis, rheumatoid arthritis, osteoarthritis, as well as psychotic and neurological disorders. The AXOR87 DNA and protein sequences may also be used as vaccines. The present amino acid sequence (encoded by a sequence located on chromosome 12q24) represents the human AXOR87 protein.

GCREC polypeptides are useful for screening compounds that modulate their activity. They are useful in the diagnosis, prevention and treatment of disorders which include the diagnosis, prevention and activity. They are useful includes the diagnosis, prevention and treatment of disorders which include the diagnosis, prevention and treatment of disorders which include the diagnosis.

ulcer, asthma, inflammation, allergy, benign prostatic hypertrophy, multiple sclerosis and dyskinesia such as Huntington's disease and Tourette's syndrome. The composition is also useful for treating psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, delirium, dementia and severe mental retardation. (I) or the HM74-like GPCR polypeptide are also useful for treating the above mentioned diseases. (I) is useful in a diagnostic assay for detecting diseases, susceptibility to diseases and abnormalities related to the presence of mutations in the nucleic acid sequences which encode a GPCR. The polypeptide is useful to identify test compounds which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The polypeptide is also useful as a bait production of polycional antibodies. This the amino acid sequence of The invention describes a novel isolated polynucleotide (I) encoding a human HM74-like G-protein coupled receptor (GPCR) polypeptide. Reagents that regulate HM74-like GPCR are useful for modulating the activity of the protein in a disease selected from bacterial, fungal, protozoan, and viral infection, pain, cancer, anorexia, builmia, asthma, central nervous system (CNS) disease, cardiovascular disease, hypotension, hypertension, angina pectoris, myocardial infarction, urinary retention, osteoporosis, human HM74-like GPCR described in the method of the invention.

medicaments New G-protein coupled receptor, useful in the manufacture of failure and for treating receptor mediated disorders e.g. acute heart ${\tt Alzheimer}$'s disease -

Disclosure; Page 29; 46pp; English.

urinary retention, osteoporosis, angina pectoris, atherosclerosis, restenosis, diseases involving excessive or reduced proliferation or loss of smooth muscle cells, aneurysm, stroke, ischaemia, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting; blood circulating affections including acute heart failure, hypotension, hypertension and myocardial infarction psychotic; neuronal disorders such as anxiety, schizophrenia, maniac depression, depression, delirium, dementia, severe mental retardation; degenerative diseases; neurodegenerative diseases such as Alzheimer's disease, Parkinson's disease; and dyskinesias e.g. Huntington's disease or Gilles de la Tourette's syndrome and other related diseases. The present sequence is GPCRx14 protein. nucleotide encoding it. GPCR are useful in the manufacture of a medicament for the prevention and/or treatment of receptor-mediated disorders e.g. viral infections, virus and bacterial diseases diseases and disorders involving disturbances of cell migration, diseases or perturbations of immune system including cancers, development of tumours perturbations of immune system including cancers, development of tumours and tumour metastasis, inflammatory and neoplastic processes; bac and fungal infections, in wound and bone healing, dysfunction of The present invention relates to a G-protein coupled receptor (GPCR) and regulatory growth functions; pains, diabetes, obesity, anorexia, bulimia bacterial

The polypeptides have potential cardiant, and antivital activity. The CC antiarteriosclerotic, anabolic, cytostatic and antivital activity. The CC polypeptides can be administered therapeutically, especially using gene CC therapy and expressing the encoding DNA in vivo, to treat or prevent CC GPCRX-associated disorders, especially in humans. For example, they can CC be used to treat/prevent cardiomyopathy, atherosclerosis, disorders CC related to signal processing and metabolic pathway modulation (e.g. CC obesity, anorexia), diabetes, osteoporosis, Crohn's disease, multiple CC sclerosis, asthma, cancers, neurodegenerative disorders (e.g. Alzheimer's CC disease, Parkinson's disorder, Huntington's disease), immune disorders, certain the presence of or predisposition to a disease associated CC with altered levels of the polypeptide in mammals (especially humans) by CC detecting alterations in polypeptide expression levels relative to cellular receptors or downstream effectors) and/or agents modulating cellular polypeptide expression or activity, useful as cc antagonists and agonists in disease treatment.

                                                                                                           The present invention relates to novel G protein-coupled receptors (nGCPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present sequence is one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. nGPCRx are useful for identifying compounds useful for treating schizophrenia. Detection of nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders, renal failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases.
and neuronal disorders such as Alzheimer's disease, Parkinson's disease migraine and senile dementia. Additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune
                                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                    New G protein-coupled polynucleotide useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       25-MAY-2001

A pharmaceutical composition comprising EX20 polypeptide, a variant of EX20, an antibody which immunoreacts with EX20, a polynucleotide encoding EX20 or an antisense oligonucleotide comprising a nucleotide sequence complementary to EX20 can be used in diagnostic and therapeutic applications for treating an inflammatory disease. Such inflammatory diseases include asthma, adult respiratory diseases. Such inflammatory diseases include asthma, adult respiratory distress syndrome (ARDS), chronic obstructive pulmonary disease (COPD) including chronic bronchitis, emphysema, pneumoconiosis, neutrophil or eosinophil related disorders, aliway and lung-related disorders, rheumatoid arthritis, inflammatory bowel disease, ulcerative colitis, and skin diseases such as eczematous dermatitis. The present sequence represents human inflammation-associated corps exyon of transitions.

                                                                                                                                                                                                                                                                                                                        The sequence represents a human G-protein coupled receptor (GPCR), hRUP25. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents -
